The data of various investigators, where numerous lead oxyhalides are considered as separated chemical compounds, evoked doubts as to the correctness of conclusions of some of the authors. The oxyhalides of lead of different composition which were obtained in the present study strengthened these doubts. Data concerning the exchange in the systems $\text{PbBr}_2 - \text{NH}_4\text{OH}$ and $2 \text{PbO} \cdot \text{H}_2\text{O} - \text{KBr}$ converted these doubts into a certainty.
